# PROJECT 1

## 施针疗渝岛 - 基于针灸理论人与城市共疗愈的城市微更新设计 (课程设计)

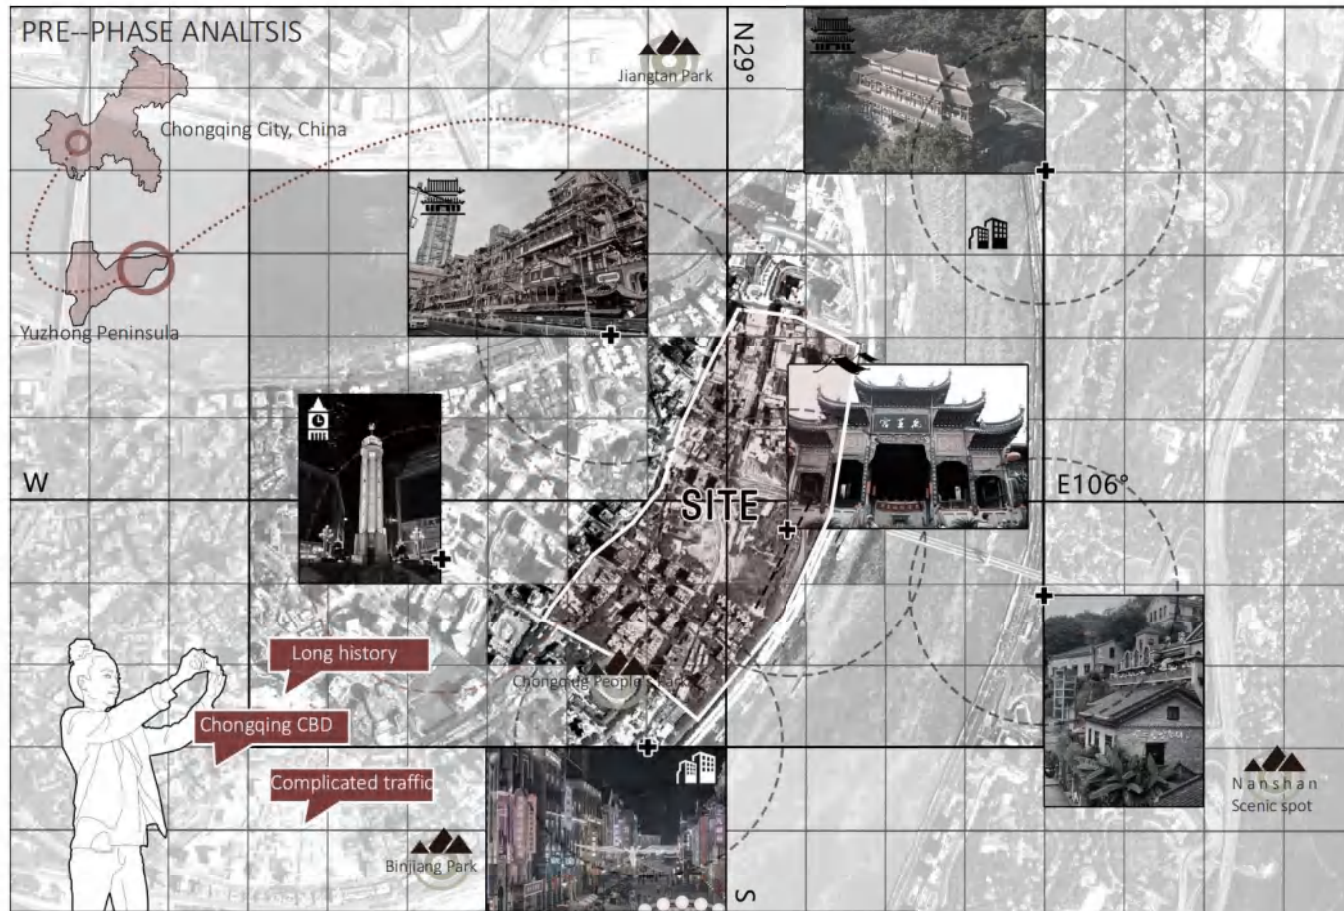

Acupuncture healing of chongqing Yuzhong Peninsula

完成时间: 2023 年

# Acupuncture healing of Chongqing Yuzhong Peninsula

The theme of this design is the Urban renewal design of Yuzhong District under the guidance of people and City co-healing. The project site is located in Yuzhong Peninsula, Chongqing, China. Yuzhong Peninsula is a region with rich historical deposits. There are very typical problems of declining cultural tourism cities and crowded living space of residents here, which can trigger my thinking about urban renewal.

## Research on the source of anxiety of city

The accessibility of urban traffic is weak, and the open space is few.

The historical context is not protected enough, and the signs of the city wall ruins are not clear.

Urban green land rate is low, hard land is mostly.

The type of economic industry is single, and the business model is backward.

CITY GATES

IMMIGRATE

PROVISIONAL CAPITAL

INTERNET CELEBRITY

The site area is 563,736 square meters. It is formed by Chaodong Road, Xinhua Road, West Fourth Street and Yangtze River Binjiang Road. There are rich cultural and historical buildings in the site, and the red and anti-Japanese culture is rich. And contains Chongqing built historical sites, Bayu cultural characteristics are obvious.

In 316 BC, Qin sent Zhang Yi to Shu to destroy Ba and build the city of Jiangzhou

Seventeen gates were built in the early Ming Dynasty

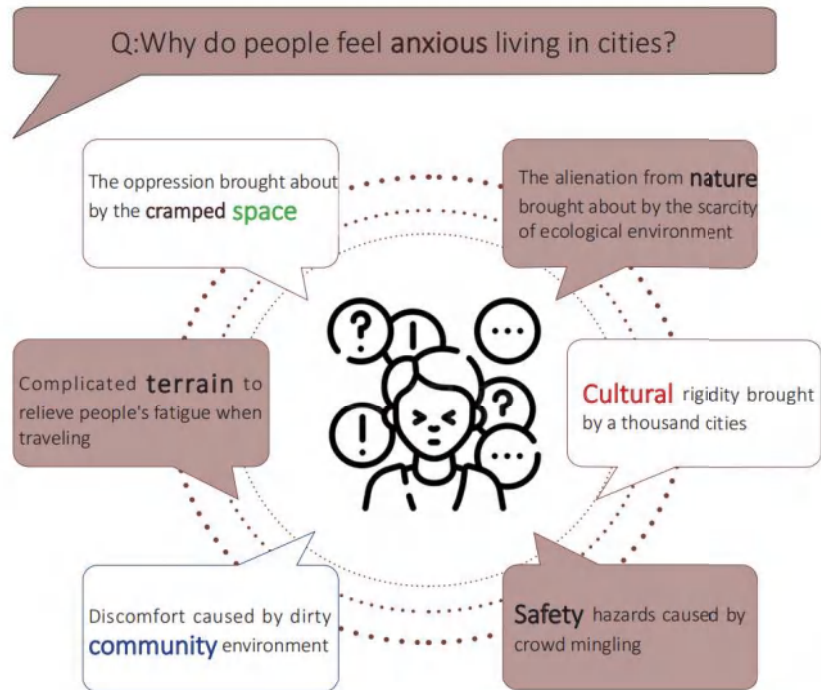

A large-scale migration occurred in the Qing Dynasty, "Huguang filled Sichuan"

Chongqing became the rear center of China's Anti-Japanese War

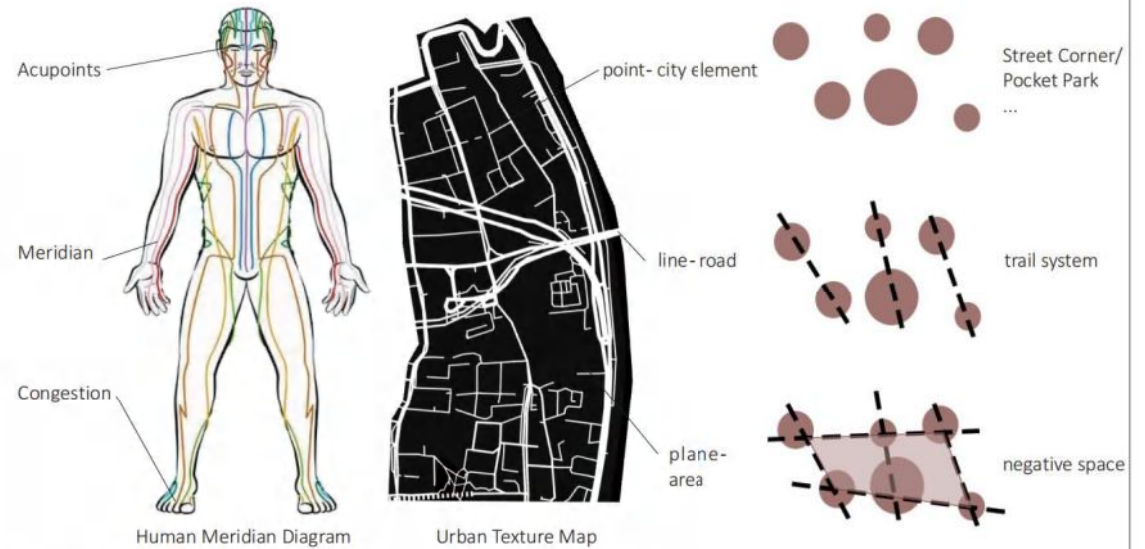

In 2022, Yuzhong District joined "Bashu Cultural Tourism Corridor District and County Cultural Tourism Creative Industry Alliance"

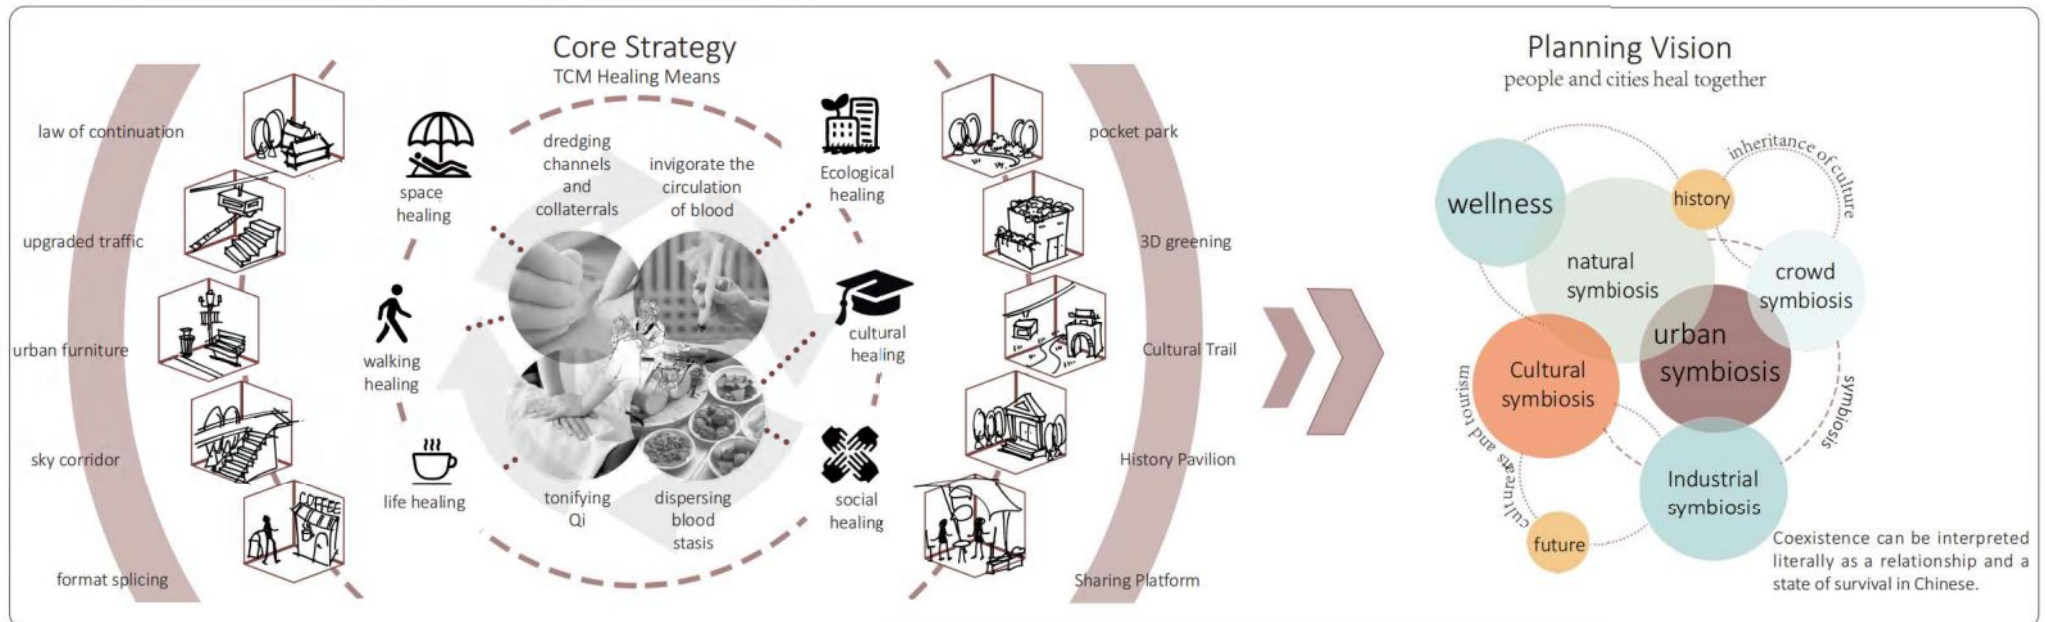

## Thematic elaboration

## Introduce the theory of meridians of traditional Chinese medicine-Acupuncture Theory

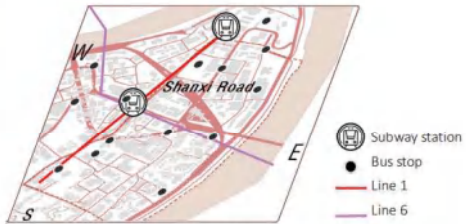

The acupoints and meridians of the human body form a network-like communication system. The meridians are the channels for sensory transportation, and the acupoints are sensitive points on the channels. We understand the city as an organic whole, combining modern urban design with the social environment theory of traditional Chinese acupuncture, using small-scale interventions to change the larger urban environment.

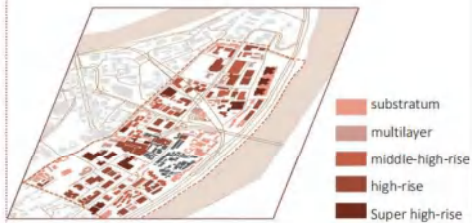

## Building evaluation

Traffic network

Function of building

Height of building

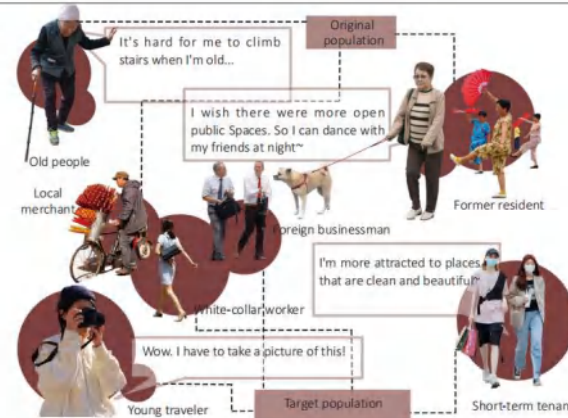

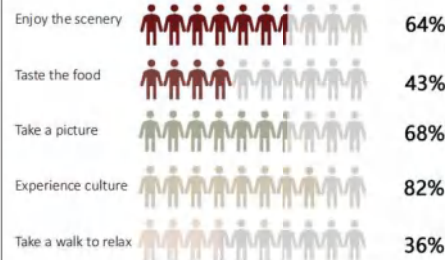

Quality of construction

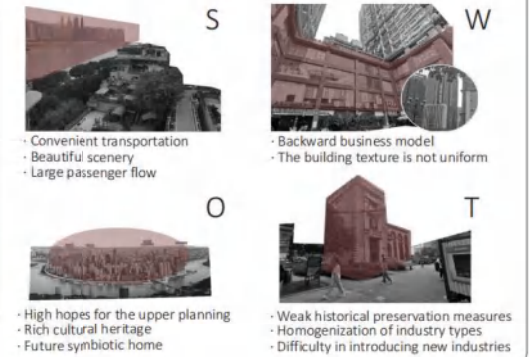

Age of building

## Population composition analysis

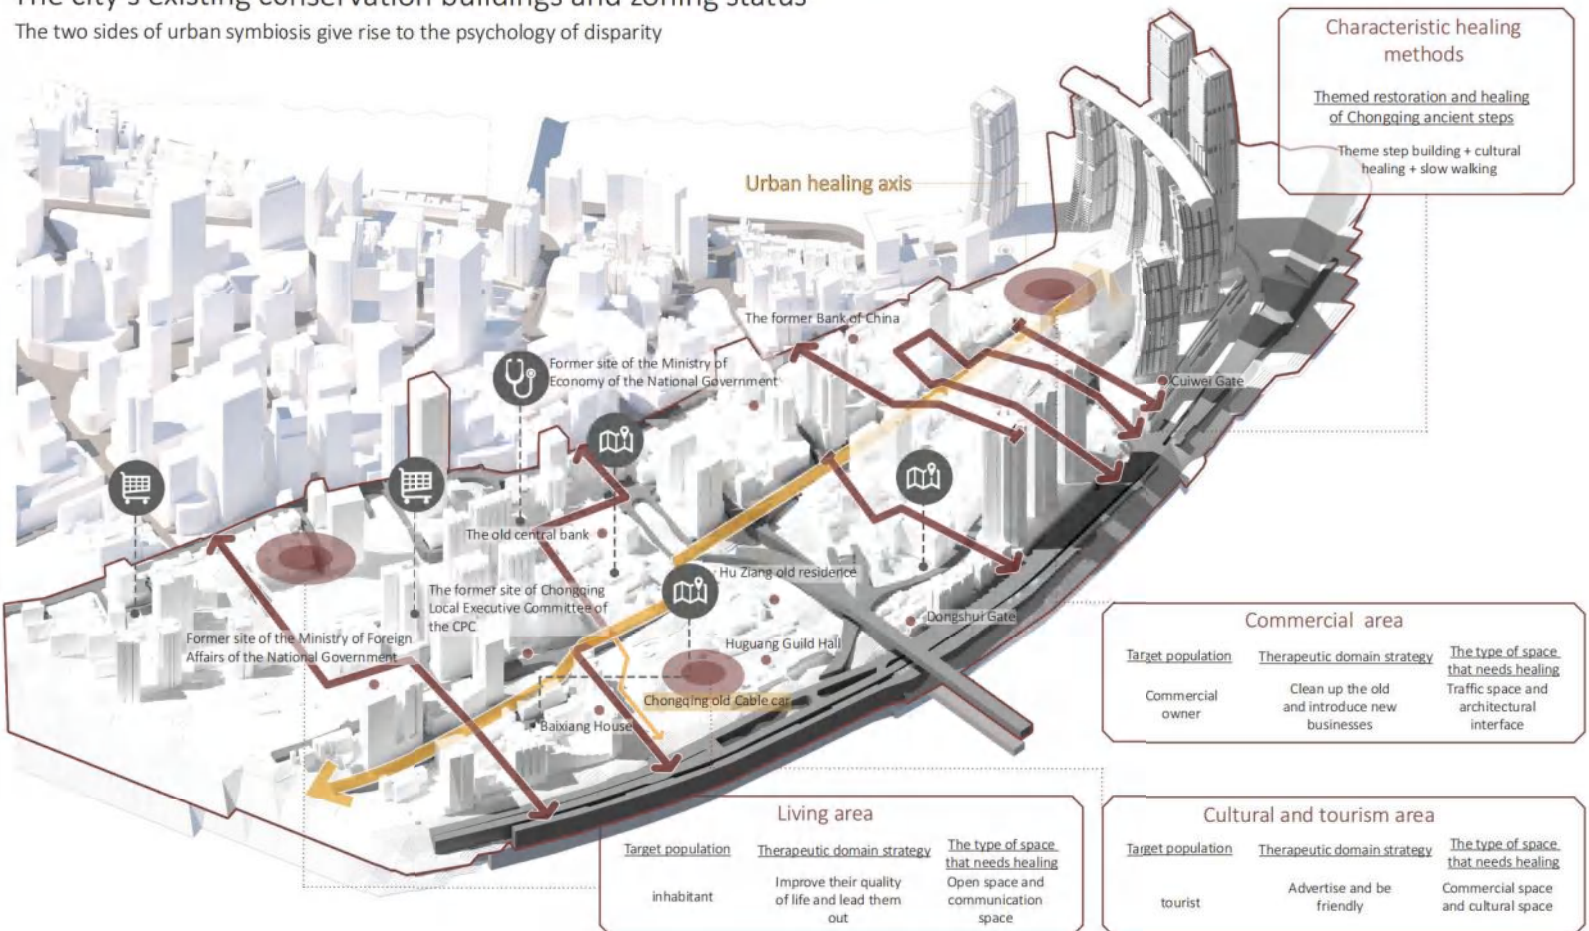

## Industrial advantage analysis

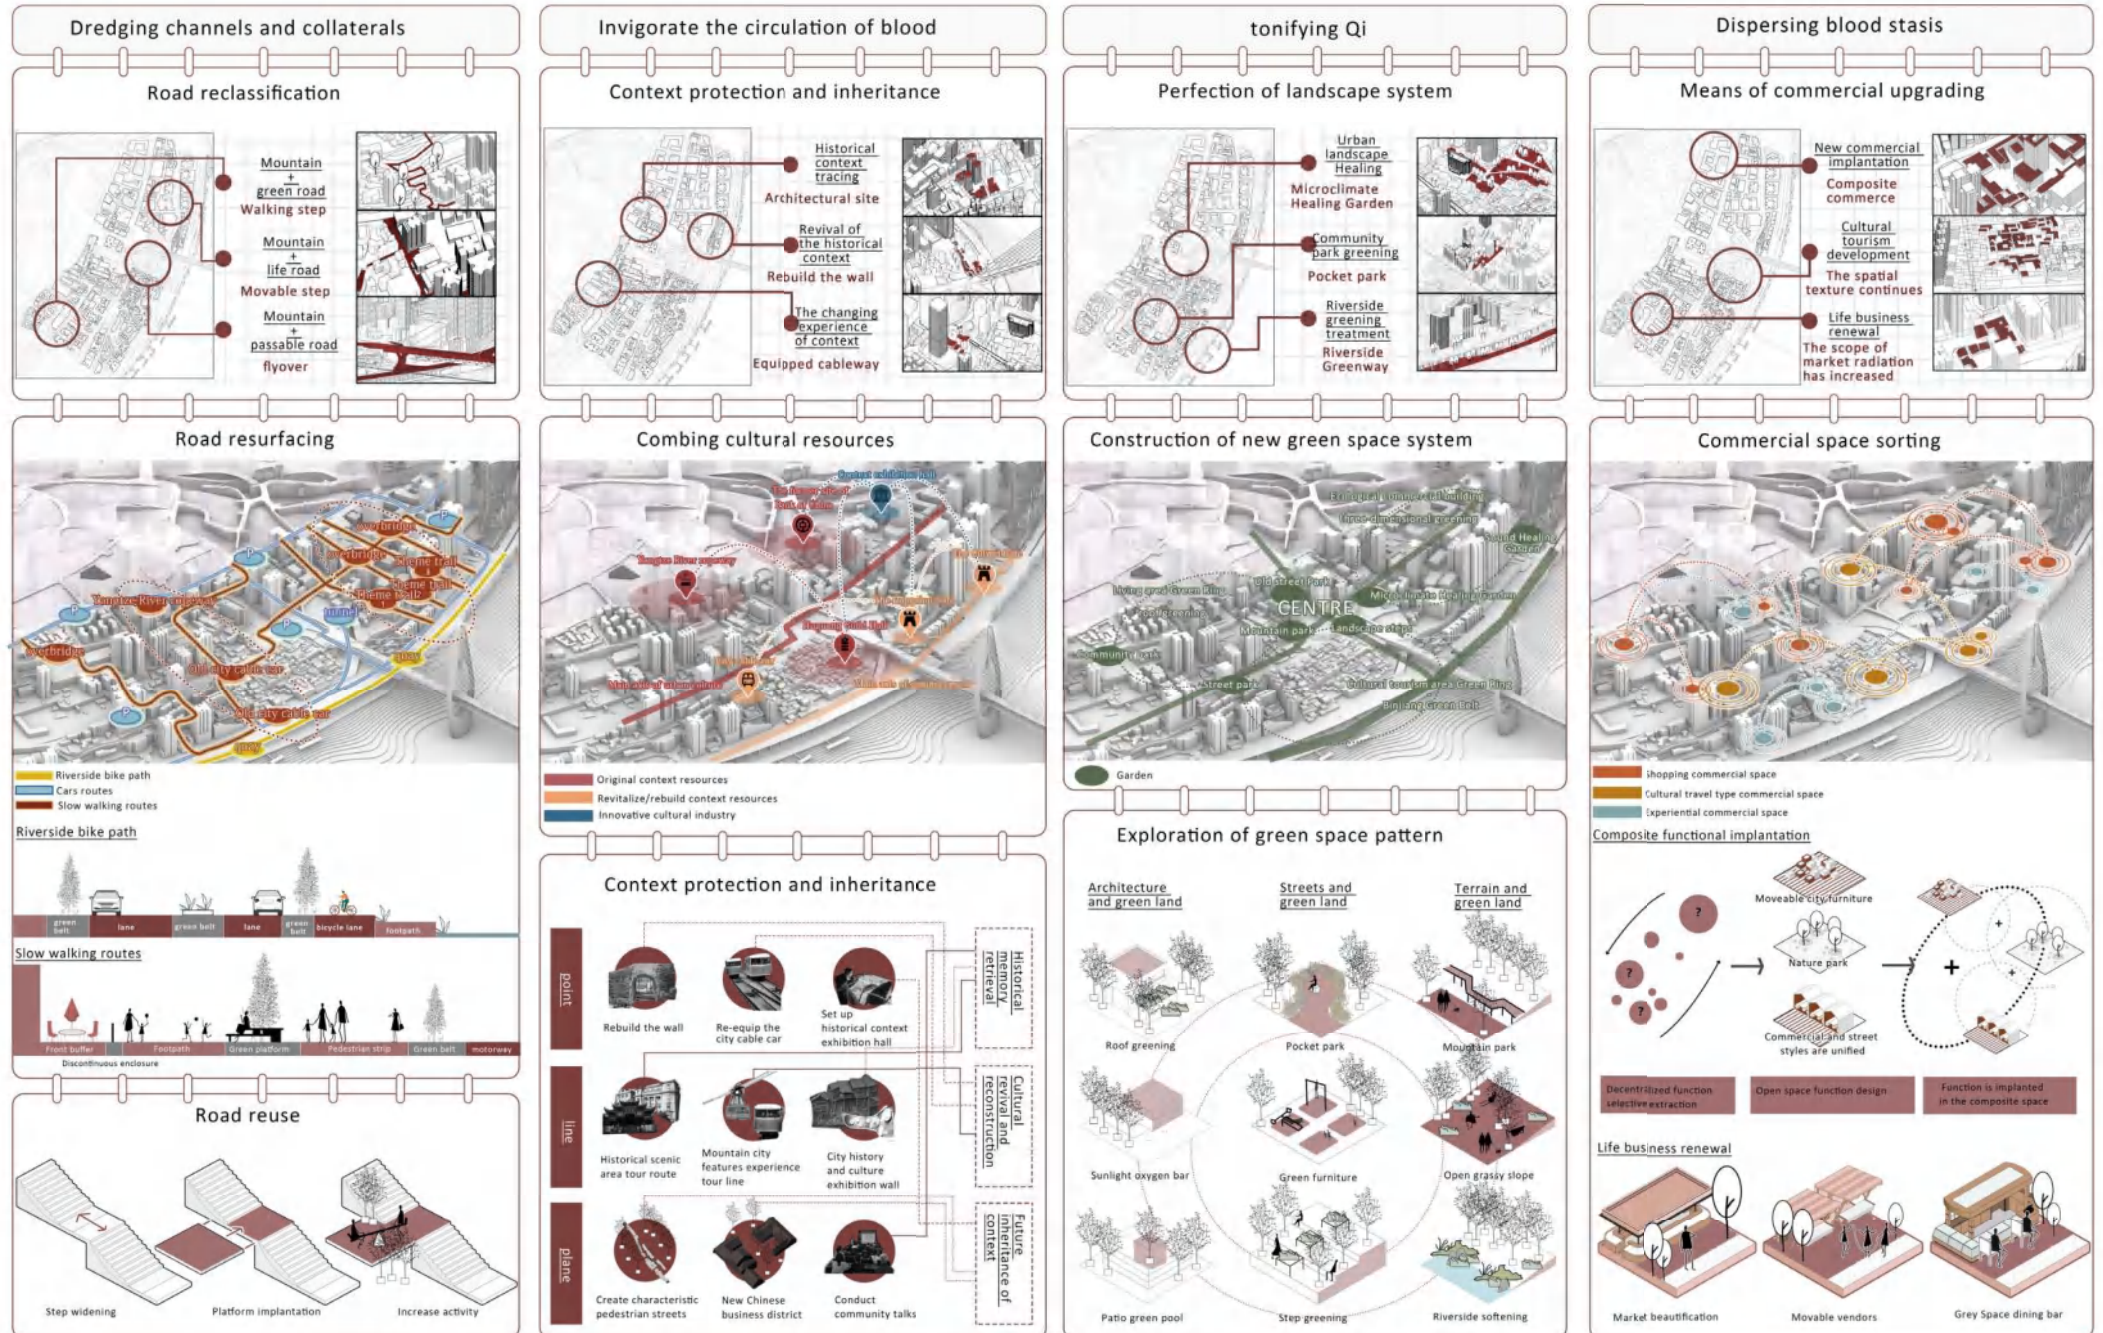

## The city's existing conservation buildings and zoning status

The two sides of urban symbiosis give rise to the psychology of disparity

# How to integrate acupuncture theory with urban design?

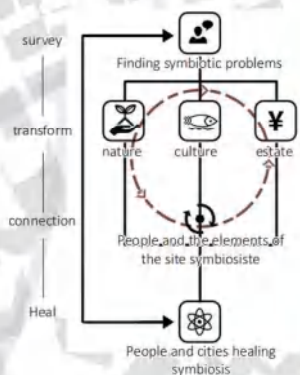

# Master plan

## Economic and technical index

Total area: 0.56 km<sup>2</sup>  
 Total construction area: 0.622 km<sup>2</sup>  
 Reserved building area: 184419.95 m<sup>2</sup>  
 New construction area: 69,160.4 m<sup>2</sup>  
 Building density :45%  
 Floor area ratio: 2.8  
 Green space rate: 30%

## Plane updating idea

## LEGEND

- Dock Cultural Exhibition Hall
- Compound ecological commercial building
- Three-dimensional green shopping malls
- Shop group
- Yuzhong Administration Building
- Sound Healing Garden
- Bayu people experience ancient steps
- Small commodity wholesale city
- Variable store ancient steps
- Garden ancient steps
- 11.12 Glass dome shopping street
- Haik Yingzhou
- Ancient City Wall Souvenir convenience Store
- East Watergate Old Street
- Square in front of the ruins of the ancient city wall
- Mountain Culture AR Museum
- Microclimate Healing Park
- Department store
- Former Bank of China
- Greening the parking garage
- Old Street Park
- Jinhe Lido
- Chaotianmen Tunnel
- Mountain Park
- Huguang Guild Hall
- Mountain Park
- Hospital of Traditional Chinese Medicine
- The old lane
- The Yangtze River cableway
- Ropeway platform
- Tengu Commercial Street
- Guild hall derived cultural tourism city

Feature architecture and collage of the riverside scene

NOW-Healing room in the shape of boxes

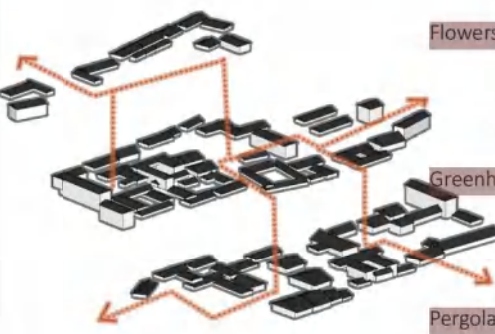

Sauna

Meditate

Oxygen bar

Between the White Elephant Residence and Huguang Guild Hall, there is an empty space for construction. Due to the characteristic mountainous terrain and the location between the Internet celebrity attractions, as a stop and rest point during rapid walking, 15x15m square boxes with built-in healing methods of different scenarios are scattered down and down, in which people carry out relaxation activities such as sauna, meditation and steam therapy. The interpenetration of each corridor and platform also makes people naturally dissolve the terrain height difference during the march.

PAST-Ancient commercial street

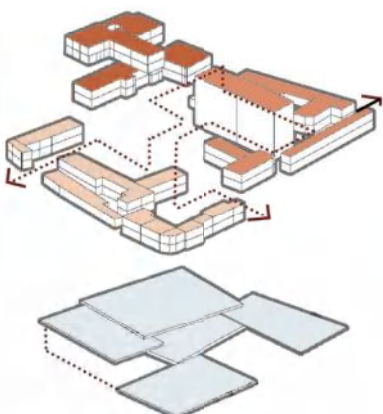

Flowers

Greenhouse

Pergola

The original Huguang Guild Hall was independent from the edge of the ruins of the ancient city wall, and to the south was a large-scale real estate. The surrounding configuration was not convenient, and the needs of tourists such as catering could not be met. And there is an obvious fault between the ancient building form of slope roof and the surrounding residential community. Therefore, choose to extend the texture of the ancient building downward, and configure the service functions such as catering teahouse cultural creation inside. Explore the surrounding economic benefits of influencer attractions and border with healing centers.

FUTURE-Multi-theme platform

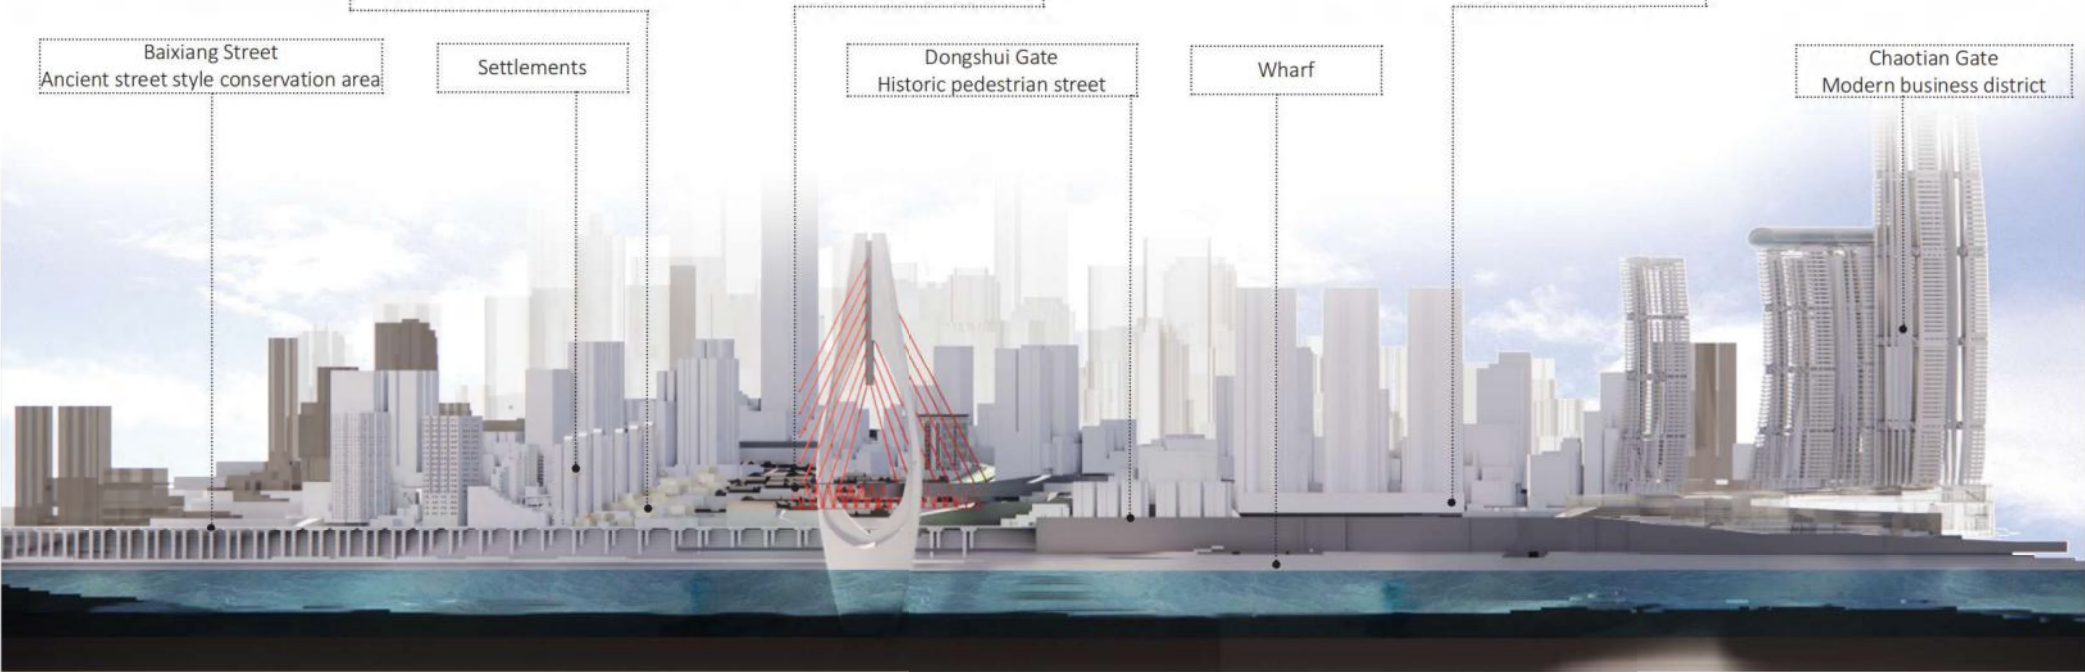

DIY

AR/VR

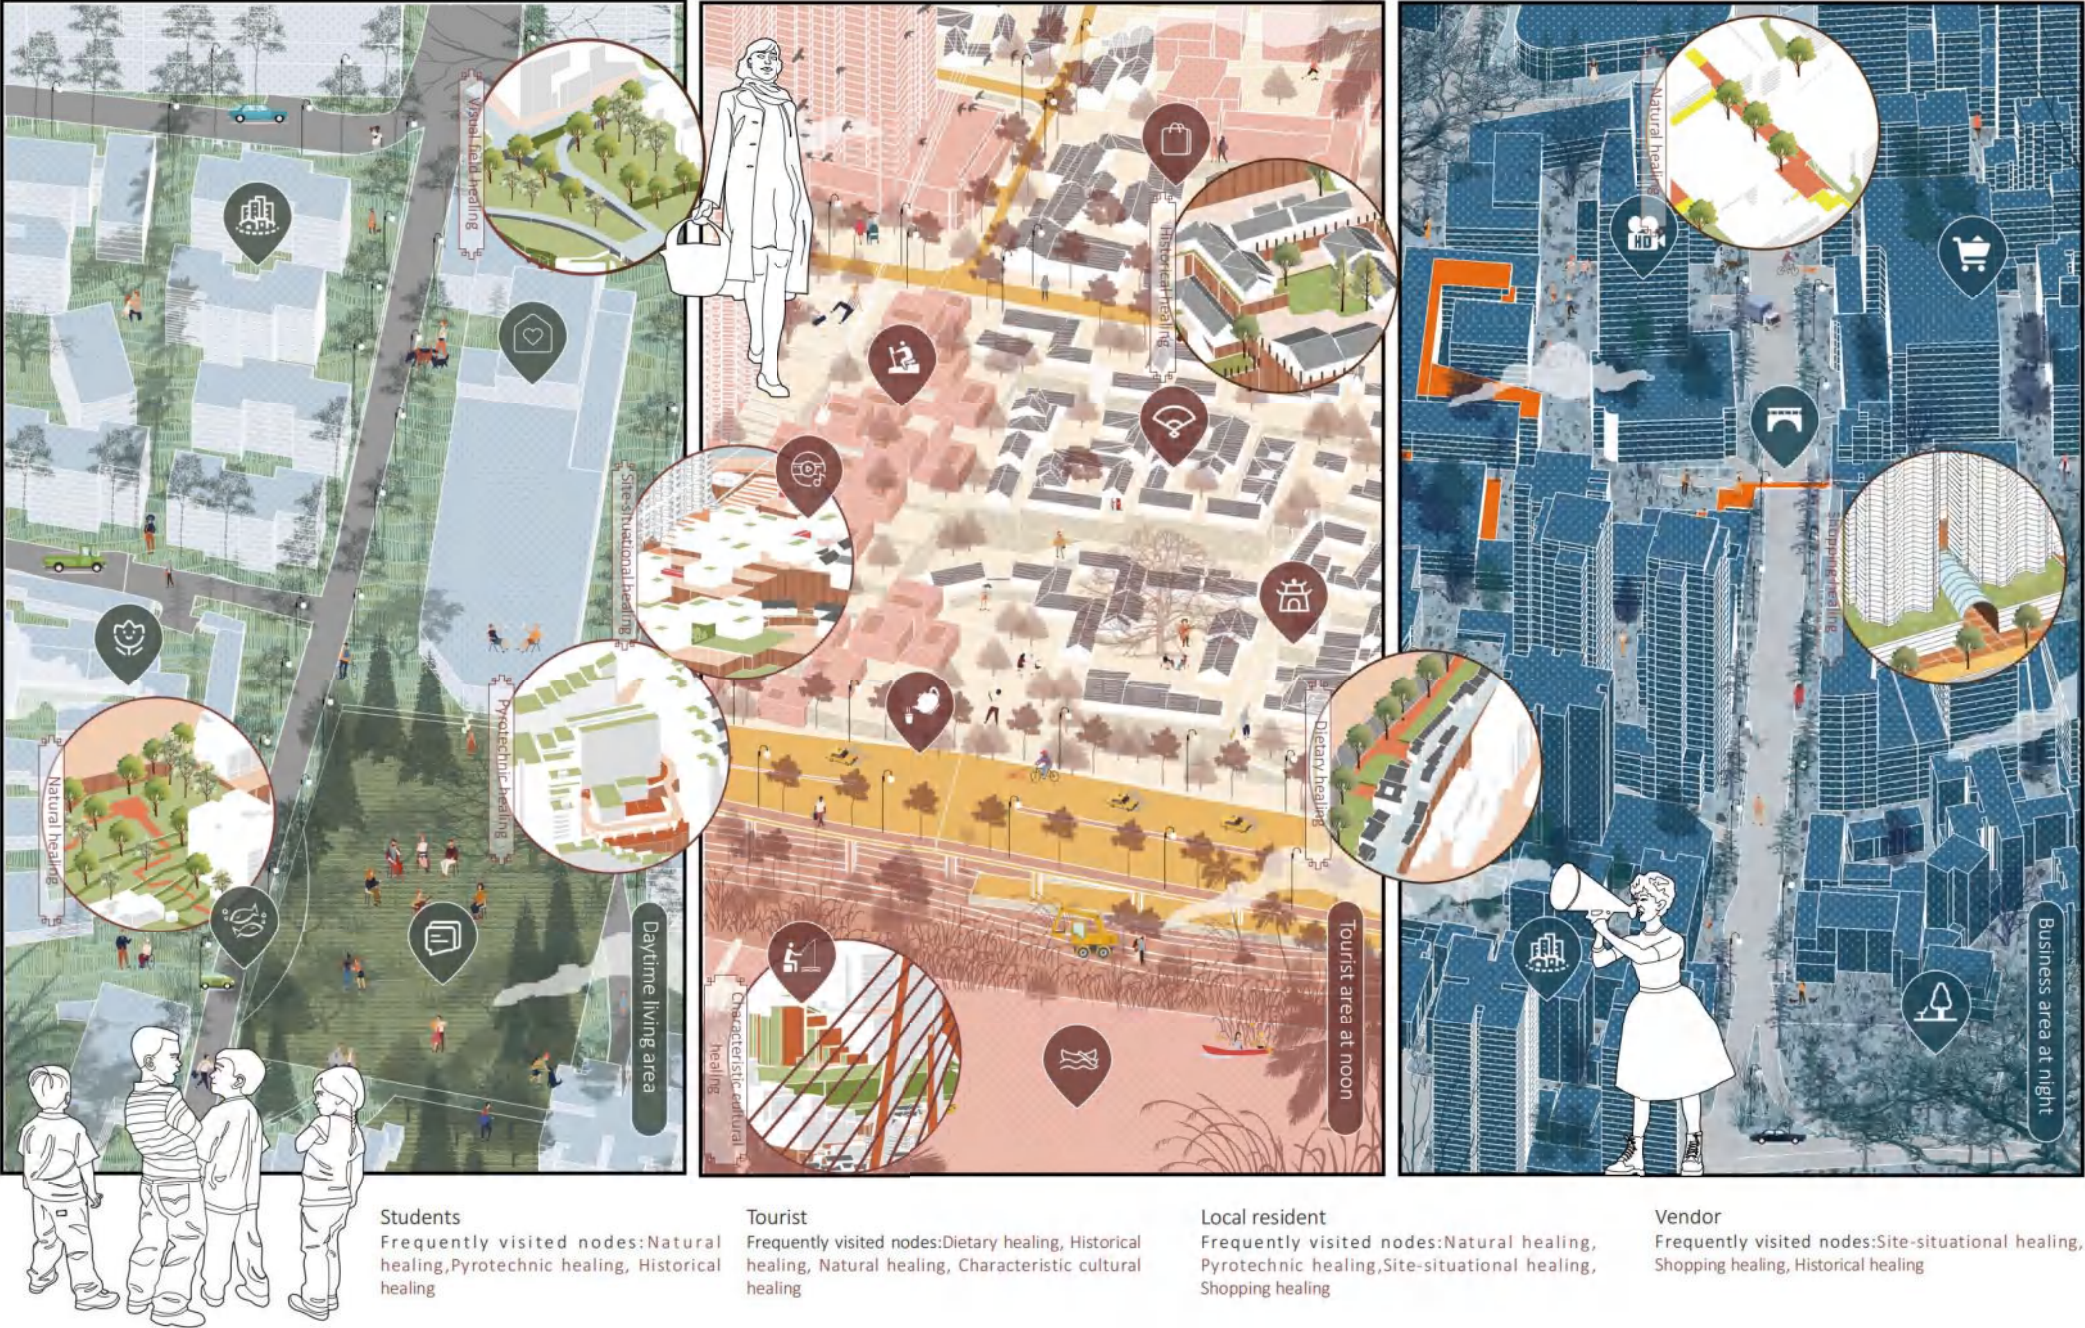

TEA

The original flower and bird market has been declining for a long time, the building facade is old and dirty, and the tour experience is insufficient for one of the exits of the largest people's park in Yuzhong Peninsula, so the design of the flower and bird market is updated. There are three levels of height difference in the site, which are divided into small courtyards around the central theme of open space in the form of linear small shops.

Creation of new life scenes

This project explores what urban elements make residents feel anxious, hoping to alleviate urban diseases by updating urban nodes using traditional Chinese acupuncture methods. With the experience and sense of existence brought by the city as the core, it pays attention to the psychological experience changes brought by the external environment, and finally realizes the harmonious symbiosis between people and the city. People no longer want to escape the city, but to embrace the city and make the city truly a home that people can trust.

## Harmony in Motion:

## Intergenerational Safety Town Renovation

### Design Berif

This design aims to enhance the Sau Mau Ping Road Safety Town through functional optimization, intergenerational integration, and safety. It connects the reading and lecture rooms, adds stepped seating with storage, and flexible partitions for versatile use. A dedicated equipment area supports staff efficiency, while the workshop becomes a "half-storage, half-exhibition" space with rolling cabinets for display.

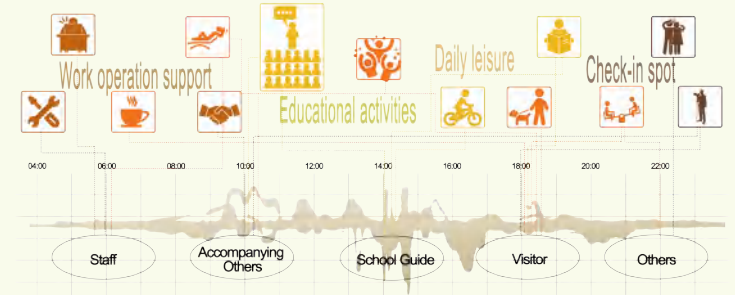

To improve landscape and transparency, 15% of the fence is removed to attract foot traffic, while patterns inspired by road maps are added. All trees are preserved, and the children's play area features a dual-purpose landscape structure for parent-child interaction.

Traffic education is innovated with updated road signs and a transparent platform for immersive learning. Overall, the design fosters practicality, ecology, and inclusivity.
